USPS Reports Steady Service Performance Improvements Across All Mail Categories

- *46 of 112 new package sorting machines now helping to speed package processing and delivery across the country*
- *Continued progress on network and operational initiatives bolsters preparation for higher delivery demands of the 2021 holiday peak season*
- *Improving service performance and the Postal Service's infrastructure are elements of the agency's 10-Year Delivering for America plan*

WASHINGTON, DC — The U.S. Postal Service reported data for fourth-quarter service delivery performance through the first two weeks of August that showed ongoing improvements from the third quarter ended June 30 across all First-Class, Marketing and Periodical mail categories.

Fourth-quarter service performance for July 1 through August 12 included:

- **First-Class Mail:** Delivered 88.8 percent of First-Class Mail on time against the USPS service standard, an improvement of 1.3 percentage points from the third quarter.
- **Marketing Mail:** Delivered 92.6 percent of Marketing Mail on time against the USPS service standard, an improvement of 1.6 percentage points from the third quarter.
- **Periodicals:** Delivered 82.4 percent of Periodicals on time against the USPS service standard, an improvement of 3.1 percentage points from the third quarter.

The Postal Service's recent service delivery improvements have been, in part, the result of a strategic shift to more ground deliveries, decreasing the agency's reliance on the limited cargo capacities of third-party air carriers, and improved network efficiencies.

[Delivering for America](#), the Postal Service's 10-year plan for financial sustainability and service excellence, seeks to meet or exceed its goal of 95 percent on-time service performance for all mail and shipping product delivery based on standards as all elements of the plan are implemented.

The Postal Service is preparing for the higher delivery demands of the 2021 holiday peak season through increased hiring of delivery and plant personnel, the leasing of millions of additional square feet of sortation facilities, and the installation of new processing equipment to accommodate higher volumes and customers' evolving mail and package delivery needs. Since April, the Postal Service has installed 46 of 112 new package sorting machines, reflecting the Delivering for America plan's \$40 billion of infrastructure investments over ten years.

This past week, machine installations occurred in Cincinnati (OH), Shreveport (LA), Spokane (WA), and Toledo (OH). Other recent installations occurred in Anchorage (AK), Eagan (MN), Philadelphia (PA), Traverse City (MI), Huntsville (AL), Houston (TX), Mid-Carolina (NC), Memphis (TN), Denver (CO), Seattle (WA), St. Louis (MO), and Teterboro (NJ).

Installations are continuing across the country as the Postal Service plans to have new equipment running at 112 facilities by the 2021 peak holiday season. Additionally, the Postal Service is making a concerted effort nationwide to hire new employees ahead of the 2021 peak holiday season.

Service performance is defined by the Postal Service from the acceptance of a mail piece into our system through delivery, measured against published service standards.

The Postal Service generally receives no tax dollars for operating expenses and relies on the sale of postage, products, and services to fund its operations.
