

United States Postal Service®
Quarterly Performance for USPS Marketing Mail®

Quarter I
FY2021

Overview

Beginning FY2019 Q1, service performance for USPS Marketing Mail® Letters and non-Saturation flats is measured through the USPS® internal measurement system. The system uses documented arrival time at a designated postal facility to start the clock, and an Intelligent Mail® barcode (IMB®) scan by postal personnel at delivery for randomly selected delivery points to stop the clock. Mail piece tracking from IMB® in-process scans is used in conjunction with the sampling data to extrapolate results for the entire volume of measurement eligible Full Service Intelligent Mail. The transit time from the start-the-clock through final automated processing is the Processing Duration leg, and the transit time from final automated processing until delivery is the Last Mile. Total transit time was calculated for the mail and compared with the appropriate service standard for the product to determine the service performance.

Scores prior to FY2019 Q1 were calculated and compiled by an independent external contractor. The system used for this reporting was called the Intelligent Mail® Accuracy and Performance System (iMAPS). The external contractor determined service performance based on the elapsed time between the start-the-clock event recorded by U.S. Postal Service® and the stop-the-clock event recorded by anonymous households and small businesses that report delivery information directly to the contractor. The service measure consisted of two parts: (1) how long mail pieces take to get through processing, and (2) how long mail takes from the last processing scan to delivery. The second portion was used as a delivery factor differential to determine the percent of all USPS Marketing Mail® delivered on the last processing date versus the percent delivered after the last processing date. Service performance was measured by comparing the transit time to USPS® service standards to determine the percent of mail delivered on time.

The service performance measure for Destination Delivery Unit (DDU) Entry Saturation flats involves the identification of major weekly Saturation mailings within delivery units. Delivery of these mailings is captured with a scan made by carriers at the completion of delivery of all pieces on the route. Service performance is measured by comparing the delivery date to the end date of the mailer requested in-home window to determine the percent delivered on time.

The service performance measurement system for Every Door Direct Mail – Retail® (EDDM Retail®) uses the documented arrival time of a mailing at a retail unit to start the clock, using the point-of-sale scan when mail is handed to U.S. Postal Service®, and an Intelligent Mail® parcel barcode (IMpb®) scan by a USPS® carrier to stop the clock. The delivery of bundles of EDDM Retail® pieces is captured with a scan made by carriers at the delivery unit upon distribution for delivery. Service performance is measured by comparing the total transit time of mail piece bundles to the service standard to determine the percent delivered on time.

Results for DDU Entry Saturation flats and EDDM Retail® are combined with other Destination Entry Standard Mail in the Destination Entry scores in this report.

The service performance measure for USPS Marketing Mail® Parcels with USPS Tracking® serves as a proxy for measuring service performance for USPS Marketing Mail® Parcels.

Limitations

Due to limited automated processing for USPS Marketing Mail® Flats, the service performance results may not be representative of all USPS Marketing Mail® Flats performance. While Destination Delivery Unit (DDU) entered Saturation Flats and EDDM Retail® Flats have been included this quarter, significant gaps in the coverage of non-Saturation/non-EDDM Retail® DDU Entry mail still remain and are excluded from measurement. Results for USPS Marketing Mail® Parcels, which represent less than 0.1 percent of all USPS Marketing Mail®, are not included in the overall USPS Marketing Mail® results.

Performance Highlights

National Destination Entry mail achieved 86.3 percent on time in FY2021 Quarter 1, which is 5.7 points lower than the same period last year. For Destination Entry mail, 97.6 percent was delivered within service standard plus three days. Southern California led the nation in Destination Entry performance with 95.4 percent on time.

End-To-End Entry national performance was 70.4 percent on time, which is 3.2 points higher than the same period last year. In FY2021 Quarter 1, 89.7 percent of End-To-End Entry USPS Marketing Mail® was delivered within the service standard plus three days. The Pacific Northwest Division had the highest End-To-End Entry score with 77.5 percent on time.

Quarterly Performance for USPS Marketing Mail®
Mailpieces Delivered Between 10/01/2020 and 12/31/2020

Division	Destination Entry	End-To-End
	Percent On Time	Percent On Time
Eastern Region	82.4	66.5
Chesapeake	80.4	60.7
Coastal Southeast	84.2	64.3
Lakeshores	81.0	66.5
Mid-Atlantic	81.9	65.1
New England	86.4	74.8
New York Metro	90.9	72.5
Western Region	90.8	73.5
Mid-South	85.7	67.0
Midwest	90.4	71.7
